

PHP Shopping Cart Project:

It is very basic project for any PHP developers. When I was first learned PHP, I just start my PHP journey with this project. If you want to develop PHP project in the first time then it is ideal one for you.

PHP Blogging System:

This projects useful for anyone who already completed PHP shopping cart project and want to hone his/her PHP skill.

Online Dictionary:

Online dictionary is another important project. You think that it is easy project. It is not easy project. You need to consolidate blogging system in this project. Such as an online dictionary site must have discussion blog. So try to do this.

Online Task Management System:

You can do a project for your school or college where students and teacher can manage their assignment easily or assigned task easily. User can create task, manage their task etc from online task management system software.

Online Exam System:

Online exam system is another popular project for PHP learners. In online exam system anyone can take exam and test their result. In popular tutorial website or blog uses live online system.

Blood Management System:

Blood Management System is a system where a user can register for blood, anyone can donate blood, anyone can search for blood. You can also add discussion section.

E-learning:

It is another PHP project idea has came in my mind now. E-learning, a simple php project for newbie. It has different attributes such as learning through online,

Online Newspaper:

You already knew about online newspaper. It is for advanced level PHP developers.

Library Management System:

Didn't you consider this before. It is very common **PHP project idea**. You have observed your college or university library. So think what should be the necessary role will be used in Library Management System.

E-tendering:

Through this project you can automate the government tendering

process. This project is less important.

Job Recruitment System:

You can search it's features through Google search engine. You can see the features in this site [Job Recruitment System](#)

Railway Ticket Management System:

You can take this project as a challenge. In every railway ticketing system transaction and security is very important. So you have to consider these issue.

Project Management System:

This project like task management system. I think it is not bad PHP project idea. You can develop this if you think that you have gathered enough experience in this field.

Student Information System project in php

As you know there are Thousands of college and schools in a city, and there are Lakhs of students who come around the works to learn and study. So every college, Institute, school would like to have collect all information of Students. So i have added: **Student Information System project in php**. This project have a admin who have full control over the entering of information of student's. Admin have full right to make any modification in the student information records. There is a concept that all the information must be add into the project Behalf of written documents of student's. These written document includes Certificates, license, RC etc. These documents works as evidence that the information is accurate. Student can make appeal in any emergency case to admin, to change in it.

Student Information System project in php are mostly used by College and schools, all the fee structure are kept in these project. It shows how much pending Balance is Due from the student.

Advantages of Student Information System project:

Student Information System can provide several strategic advantages to your Colleges:

- No Cost of Ownership of this project, i have added this project as free as i usually adds other projects. You can download without any cost.
- All the operational work is automatically. Si it provides automation feature.
- You will save your precious time thus you can focus on strategic tasks.
- Multiple Campus Management can be easily implemented via **Student Information System**.
- Availability of this project is widely. So you can find it anywhere. Anywhere Availability
- Scalable and easily Customizable project.
